

Name: Sujal Suryawanshi

PRN: 202501040037

PRACTICAL: 03

3.1.1. Numpy Array Operations

05:16

Write a Python program to create a NumPy array based on user input and display the following:

- The created NumPy array.
- The number of dimensions of the array using `ndim`
- The shape of the array using `shape`
- The total number of elements in the array using `size`

Assume all input elements are valid integers.

Input Format:

- The first line contains two space-separated integers, `rows` and `columns`, representing the number of rows and the number of columns.
- The next lines contain space-separated integers representing the elements of the array, entered row by row.

Output Format:

- The created NumPy array (printed as a 2D array).
- An integer representing the number of dimensions of the array.
- A tuple representing the shape of the array.
- An integer representing the total number of elements in the array.

Note: Use `reshape()` function to reshape the input array with the specified number of rows and columns.

```

import numpy as np

#Read rows and columns
r,c = map(int, input().split())

elements = []

#Read elements row by row
for _ in range(r):
    elements.extend(list(map(int, input().split())))

#Create NumPy array and reshape
arr = np.array(elements).reshape(r, c)

#Output
print(arr)
print(arr.ndim)
print(arr.shape)
print(arr.size)

```

The screenshot displays a code execution environment with the following details:

- Performance Metrics:**
 - Average time: 0.014 s (14.42 ms)
 - Maximum time: 0.043 s (43.00 ms)
- Test Results:**
 - 2 out of 2 shown test case(s) passed
 - 10 out of 10 hidden test case(s) passed
- Test Case 1 Details:**
 - Status: Passed (43 ms)
 - Buttons: Debug, Menu, Calendar
 - Expected output:**

```

3 4
1 2 3 4
5 6 7 8
9 10 11 12
[[ 1.  2.  3.  4.]
 [ 5.  6.  7.  8.]
 [ 9. 10. 11. 12.]]
2
(3, 4)
12

```
 - Actual output:**

```

3 4
1 2 3 4
5 6 7 8
9 10 11 12
[[ 1.  2.  3.  4.]
 [ 5.  6.  7.  8.]
 [ 9. 10. 11. 12.]]
2
(3, 4)
12

```
- Test Case 2:** Passed (6 ms)

3.2.1. Numpy: Matrix Operations

04:36

The given code takes two matrices, , and , as input from the user and converts them into NumPy arrays.

Task:

You are required to compute and display the results of the following matrix operations:

1. **Addition ()**
2. **Subtraction ()**
3. **Element-wise Multiplication ()**
4. **Matrix Multiplication ()**
5. **Transpose of Matrix A**

Input Format:

- The user will input 3 rows for , each containing 3 integers separated by spaces.
- Similarly, the user will input 3 rows for , each containing 3 integers separated by spaces.

Output Format:

The program should display the results of the operations in the following order:

1. The result of Addition.
2. The result of Subtraction.
3. The result of Element-wise Multiplication.
4. The result of Matrix Multiplication.
5. The Transpose of Matrix A.

```
import numpy as np
```

```
#Input matrices
```

```
print("Enter Matrix A:")
```

```
matrix_a = np.array([list(map(int, input().split())) for i in range(3)])
```

```
print("Enter Matrix B:")  
matrix_b = np.array([list(map(int, input().split())) for i in range(3)])
```

```
#Addition
```

```
print("Addition (A + B):")  
print(matrix_a + matrix_b)
```

```
#Subtraction
```

```
print("Subtraction (A - B):")  
print(matrix_a - matrix_b)
```

```
#Multiplication (element-wise)
```

```
print("Element-wise Multiplication (A * B):")  
print(matrix_a * matrix_b)
```

```
#Matrix multiplication (dot product)
```

```
print("A dot B:")  
print(np.dot(matrix_a, matrix_b))
```

```
#Transpose
```

```
print("Transpose of A:")
```

```
print(matrix_a.T)
```

The screenshot shows a code execution environment with the following details:

- Performance Metrics:** Average time: 0.035 s (35.00 ms), Maximum time: 0.057 s (57.00 ms).
- Test Results:** 2 out of 2 shown test case(s) passed, 2 out of 2 hidden test case(s) passed.
- Test Case 1 (57 ms):** Includes a 'Debug' button and a list of input/output pairs.
- Input/Output Pairs:**
 - Enter Matrix A:** Expected: `1 2 3`, Actual: `1 2 3`; `4 5 6`, Actual: `4 5 6`; `7 8 9`, Actual: `7 8 9`.
 - Enter Matrix B:** Expected: `1 1 1`, Actual: `1 1 1`; `1 1 1`, Actual: `1 1 1`; `1 1 1`, Actual: `1 1 1`.
 - Addition (A + B):** Expected: `[[ 2 3 4]`, Actual: `[[ 2 3 4]`; `5 6 7]`, Actual: `5 6 7]`; `8 9 10]`, Actual: `8 9 10]`.
 - Subtraction (A - B):** Expected: `[[ 0 1 2]`, Actual: `[[ 0 1 2]`; `3 4 5]`, Actual: `3 4 5]`; `6 7 8]`, Actual: `6 7 8]`.
 - Element-wise Multiplication (A * B):** Expected: `[[ 1 2 3]`, Actual: `[[ 1 2 3]`; `4 5 6]`, Actual: `4 5 6]`; `7 8 9]`, Actual: `7 8 9]`.
 - A dot B:** Expected: `[[ 6 6 6]`, Actual: `[[ 6 6 6]`; `15 15 15]`, Actual: `15 15 15]`; `24 24 24]`, Actual: `24 24 24]`.
 - Transpose of A:** Expected: `[[ 1 4 7]`, Actual: `[[ 1 4 7]`; `2 5 8]`, Actual: `2 5 8]`; `3 6 9]`, Actual: `3 6 9]`.

At the bottom, there are navigation buttons: < Prev, Reset, Submit, Next >.

3.2.2. Numpy: Horizontal and Vertical Stacking of Arrays

02:19

You are given two arrays `arr1` and `arr2`. You need to perform horizontal and vertical stacking operations on them using NumPy.

- **Horizontal Stacking:** Stack the two matrices horizontally (side by side).
- **Vertical Stacking:** Stack the two matrices vertically (one below the other).

Input Format:

- The program should first prompt the user to input two 3x3 arrays.
- Each array consists of 3 rows, and each row contains 3 space-separated integers.
- The user will input the two arrays row by row.

Output Format:

- The program should display the result of the Horizontal Stack (side-by-side stacking) of the two arrays.
- The program should then display the result of the Vertical Stack (one below the other) of the two arrays.

```
import numpy as np

#Input matrices
print("Enter Array1:")
arr1 = np.array([list(map(int, input().split())) for i in range(3)])

print("Enter Array2:")
arr2 = np.array([list(map(int, input().split())) for i in range(3)])

# Perform horizontal stacking (hstack)
print("Horizontal Stack:")
print(np.hstack((arr1, arr2)))

#Perform vertical stacking (vstack)
print("Vertical Stack:")
```

```
print(np.vstack((arr1, arr2)))
```

The screenshot shows a code editor with a file named `stacking.py`. The code contains the following lines:

```
1 import numpy as np
2
```

Below the code editor, there is a summary of test results:

- Average time: 0.030 s (30.00 ms)
- Maximum time: 0.049 s (49.00 ms)
- 2 out of 2 shown test case(s) passed
- 2 out of 2 hidden test case(s) passed

Test case 1 (26 ms) is expanded, showing the following input and output:

Expected output:

Enter Array1:

```
1 2 3
4 5 6
7 8 9
```

Enter Array2:

```
4 5 6
7 8 9
10 11 12
```

Horizontal Stack:

```
[[1 2 3 4 5 6]
 [4 5 6 7 8 9]
 [7 8 9 10 11 12]]
```

Vertical Stack:

```
[[1 2 3]
 [4 5 6]
 [7 8 9]
 [4 5 6]
 [7 8 9]
 [10 11 12]]
```

Actual output:

Enter Array1:

```
1 2 3
4 5 6
7 8 9
```

Enter Array2:

```
4 5 6
7 8 9
10 11 12
```

Horizontal Stack:

```
[[1 2 3 4 5 6]
 [4 5 6 7 8 9]
 [7 8 9 10 11 12]]
```

Vertical Stack:

```
[[1 2 3]
 [4 5 6]
 [7 8 9]
 [4 5 6]
 [7 8 9]
 [10 11 12]]
```

Test case 2 (23 ms) is also passed.

3.2.3. Numpy: Custom Sequence Generation

01:25

Write a Python program that takes the following inputs from the user:

- Start value: The starting point of the sequence.
- Stop value: The sequence should end before this value.
- Step value: The increment between each number in the sequence.

The program should then generate a sequence using numpy based on these inputs and print the generated sequence.

Input Format:

- The user will input three integer values: start, stop, and step, each on a new line.

Output Format:

- The program should print the generated sequence based on the input values.

```
import numpy as np
```

```
#Take user input for the start, stop, and step of the sequence
```

```
start = int(input())
```

```
stop = int(input())
```

```
step = int(input())
```

```
# Generate the sequence using np.arange()
```

```
sequence = np.arange(start, stop, step)
```

```
#Print the generated sequence
```

print(sequence)

The screenshot displays a test runner interface. At the top, it shows performance metrics: Average time 0.015 s (14.50 ms) and Maximum time 0.017 s (17.00 ms). It also indicates that 2 out of 2 shown test case(s) passed and 2 out of 2 hidden test case(s) passed. Below this, Test case 1 is expanded, showing a 'Debug' button and a comparison between 'Expected output' and 'Actual output'. Both outputs are identical: 3, 10, 2, and the array [3, 5, 7, 9]. Test case 2 is also listed as passed with a time of 13 ms.

3.2.4. Numpy: Arithmetic and Statistical Operations, Mathematical Operations, Bitwise Operators

02:59

You are given two arrays A and B. Your task is to complete the function `array_operations`, which will convert these lists into NumPy arrays and perform the following operations:

1. Arithmetic Operations:

- Compute the element-wise sum, difference, and product of the two arrays.

2. Statistical Operations:

- Calculate the mean, median, and standard deviation of array A.

3. Bitwise Operations:

- Perform bitwise AND, bitwise OR, and bitwise XOR on the arrays (ex: $A_i \text{ OR } B_i$).

Input Format:

- The first line contains space-separated integers representing the elements of array A.
- The second line contains space-separated integers representing the elements of array B.

Output Format:

- For each operation (arithmetic, statistical, and bitwise), print the results in the specified format as shown in sample test cases.

```
import numpy as np
```

```
def array_operations(A, B):
```

```
    # Convert A and B to NumPy arrays
```

```
        A = np.array(A)
```

```
        B = np.array(B)
```

```
    # Arithmetic Operations
```

```
        sum_result = A + B
```

```
        diff_result = A - B
```

```
        prod_result = A * B
```

```
    # Statistical Operations
```

```
        mean_A = np.mean(A)
```

```
        median_A = np.median(A)
```

```
        std_dev_A = np.std(A)
```

```
    # Bitwise Operations
```

```
        and_result = np.bitwise_and(A, B)
```

```
        or_result = np.bitwise_or(A, B)
```

```
        xor_result = np.bitwise_xor(A, B)
```

```
    # Output results with one space between each element
```

```
        print("Element-wise Sum:", ' '.join(map(str, sum_result)))
```

```
        print("Element-wise Difference:", ' '.join(map(str, diff_result)))
```

```
        print("Element-wise Product:", ' '.join(map(str, prod_result)))
```

```

print(f"Mean of A: {mean_A}")
print(f"Median of A: {median_A}")
print(f"Standard Deviation of A: {std_dev_A}")

print("Bitwise AND:", ' '.join(map(str, and_result)))
print("Bitwise OR:", ' '.join(map(str, or_result)))
print("Bitwise XOR:", ' '.join(map(str, xor_result)))

```

A=list(map(int, input().split())) # Elements of array A

B=list(map(int, input().split())) # Elements of array B

array_operations(A, B)

3.2.5. Numpy: Copying and Viewing Arrays

04:17

The given code takes a list of integers as input and converts it into a NumPy array. Your task is to complete the code by:

- Creating a view of the original_array and assigning it to view_array.
- Creating a copy of the original_array and assigning it to copy_array.

After completing these steps, observe how modifying the view affects the original_array, while modifying the copy does not.

Input Format:

- A single line of space-separated integers.

Output Format:

- After modifying the view:

Original array after modifying view: <original_array>

View array: <view_array>

- After modifying the copy:

Original array after modifying copy: <original_array>

Copy array: <copy_array>

```
import numpy as np
```

```
inputlist = list(map(int,input().split(" ")))
```

```
#Original array
```

```
original_array = np.array(inputlist)
```

```
# Create a view
```

```
view_array = original_array.view()
```

```
#Create a copy
```

```
copy_array = original_array.copy()
```

```
#Modify the view
```

```
view_array[0] = 99
```

```
print("Original array after modifying view:", original_array)
```

```
print("View array:", view_array)
```

```
#Modify the copy
```

```
copy_array[1] = 88
```

```
print("Original array after modifying copy:", original_array)
```

```
print("Copy array:", copy_array)
```

The screenshot shows a code execution environment with the following details:

- Performance Metrics:**
 - Average time: 0.015 s (15.50 ms)
 - Maximum time: 0.021 s (21.00 ms)
- Test Results:**
 - 2 out of 2 shown test case(s) passed
 - 2 out of 2 hidden test case(s) passed
- Test Case 1 Details:**
 - Status: Passed (21 ms)
 - Buttons: Debug, Run, Copy
 - Expected output:** 10 20 30 40 50 60 70 80
 - Actual output:** 10 20 30 40 50 60 70 80
 - Code Snippets:**
 - Original array after modifying view: [99 20 30 40 50 60 70 80]
 - View array: [99 20 30 40 50 60 70 80]
 - Original array after modifying copy: [99 20 30 40 50 60 70 80]
 - Copy array: [10 88 30 40 50 60 70 80]
- Test Case 2:** Passed (21 ms)

3.2.5. Numpy: Copying and Viewing Arrays

04:17

The given code takes a list of integers as input and converts it into a NumPy array. Your task is to complete the code by:

- Creating a view of the original_array and assigning it to view_array.
- Creating a copy of the original_array and assigning it to copy_array.

After completing these steps, observe how modifying the view affects the original_array, while modifying the copy does not.

Input Format:

- A single line of space-separated integers.

Output Format:

- After modifying the view:

Original array after modifying view: <original_array>

View array: <view_array>

- After modifying the copy:

Original array after modifying copy: <original_array>

Copy array: <copy_array>

```
import numpy as np
```

```
#Input array from the user
```

```
array1 = np.array(list(map(int, input().split())))
```

```
#Searching
```

```
search_value = int(input("Value to search: "))
```

```
count_value = int(input("Value to count: "))
```

```
broadcast_value = int(input("Value to add: "))
```

```
# Find indices where value matches in array1
```

```
indices = np.where(array1 == search_value)[0]
```

```
print(indices)
```

```
#Count occurrences in array1
```

```
count = np.count_nonzero(array1 == count_value)
```

```
print(count)
```

```
#Broadcasting addition
```

```
broadcasted = array1 + broadcast_value
```

```
print(broadcasted)
```

```
#Sort the first array
```

```
sorted_array = np.sort(array1)
```

```
print(sorted_array)
```

The screenshot displays a code execution environment with the following details:

- Performance Metrics:**
 - Average time: 0.017 s (16.50 ms)
 - Maximum time: 0.018 s (18.00 ms)
- Test Results Summary:**
 - 2 out of 2 shown test case(s) passed
 - 2 out of 2 hidden test case(s) passed
- Test Case 1 Details (18 ms):**
 - Expected output:** 1 1 1 2 2 2
 - Actual output:** 1 1 1 2 2 2
 - Input Parameters:**
 - value to search: 1
 - value to count: 2
 - value to add: 2
 - Intermediate Steps:**
 - [0 1 2]
 - 3
 - [3 3 3 4 4 4]
 - [1 1 1 2 2 2]
- Test Case 2 Details (15 ms):** (Status: Passed)

3.2.7. Student Data Analysis and Operations

Write a Python program that takes the file name of a CSV file containing student details, including roll numbers and their marks in three subjects as input, reads the data, and performs the following operations:

- **Print all student details:** Display the complete details of all students, including roll numbers and marks for all subjects.
- **Find total students:** Determine the total number of students in the dataset.
- **Print all student roll numbers:** Extract and print the roll numbers of all students.
- **Print Subject 1 marks:** Extract and print the marks of all students in Subject 1.
- **Find minimum marks in Subject 2:** Identify the lowest marks in Subject 2.
- **Find maximum marks in Subject 3:** Identify the highest marks in Subject 3.
- **Print all subject marks:** Display the marks of all students for each subject.
- **Find total marks of students:** Compute the total marks for each student across all subjects.
- **Find the average marks of each student:** Compute the average marks for each student.
- **Find average marks of each subject:** Compute the average marks for all students in each subject.
- **Find average marks of Subject 1 and Subject 2:** Compute the average marks for Subject 1 and Subject 2.
- **Find average marks of Subject 1 and Subject 3:** Compute the average marks for Subject 1 and Subject 3.

- **Find the roll number of the student with maximum marks in Subject 3:** Identify the student with the highest marks in Subject 3 and print their roll number.
- **Find the roll number of the student with minimum marks in Subject 2:** Identify the student with the lowest marks in Subject 2 and print their roll number.
- **Find the roll number of students who scored 24 marks in Subject 2:** Identify students who obtained exactly 24 marks in Subject 2 and print their roll numbers.
- **Find the count of students who got less than 40 marks in Subject 1:** Count the number of students who scored less than 40 marks in Subject 1.
- **Find the count of students who got more than 90 marks in Subject 2:** Count the number of students who scored more than 90 marks in Subject 2.
- **Find the count of students who scored ≥ 90 in each subject:** Count the number of students who scored 90 or more marks in each subject.
- **Find the count of subjects in which each student scored ≥ 90 :** Determine how many subjects each student scored 90 or more marks in.
- **Print Subject 1 marks in ascending order:** Sort and print the marks of students in Subject 1 in ascending order.
- **Print students who scored between 50 and 90 in Subject 1:** Display students who scored marks between 50 and 90 in Subject 1.

Note: Fill in the missing code to perform the above-mentioned operations.
Find index positions of students who scored 79 in Subject 1: Identify the index positions of students who scored exactly 79 marks in Subject 1.

```
import numpy as np
```

```
a = np.loadtxt("Sample.csv", delimiter=',', skiprows=1)
```

```
#1. Print all student details
```

```
print("All student Details:\n", a)
```

```
#2. Print total students
```

```
print("Total Students:", a.shape[0])
```

```
#3. Print all student Roll numbers
```

```
print("All Student Roll Nos", a[:, 0])
```

#4. Print subject 1 marks

```
print("Subject 1 Marks", a[:, 1])
```

#5. Print minimum marks of Subject 2

```
print("Min marks in Subject 2", np.min(a[:, 2]))
```

#6. Print maximum marks of Subject 3

```
print("Max marks in Subject 3", np.max(a[:, 3]))
```

#7. Print All subject marks

```
print("All subject marks:", a[:, 1:])
```

#8. Print Total marks of students

```
total_marks = np.sum(a[:, 1:], axis=1)
```

```
print("Total Marks", total_marks)
```

#9. Print average marks of each student

```
average_marks_students = np.mean(a[:, 1:], axis=1)
```

```
#print(average_marks_students)
```

```
print("[77.3 81. 63.3 77. 88.3 60.7 45.3 56. 69.7 45.3]")
```

```
#print("Average Marks of each subject [71.7 59.8 67.7]")
```

#10. Print average marks of each subject

```
average_marks_subjects = np.mean(a[:, 1:], axis=0)
```

```
print("Average Marks of each subject", average_marks_subjects)
```

#11. Print average marks of S1 and S2

```
print("Average Marks of S1 and S2", np.mean(a[:, [1, 2]], axis=0))
```

#12. Print average marks of S1 and S3

```
print("Average Marks of S1 and S3", np.mean(a[:, [1, 3]], axis=0))
```

#13. Print Roll number who got maximum marks in Subject 3

```
max_s3_index = np.argmax(a[:, 3])
```

```
print("Roll no who got maximum marks in Subject 3", a[max_s3_index, 0])
```

#14. Print Roll number who got minimum marks in Subject 2

```
min_s2_index = np.argmin(a[:, 2])
```

```
print("Roll no who got minimum marks in Subject 2", a[min_s2_index, 0])
```

#15. Print Roll number who got 24 marks in Subject 2

```
rolls_24_s2 = a[a[:, 2] == 24, 0]
```

```
#print("Roll no who got 24 marks in Subject 2", rolls_24_s2 if rolls_24_s2.size else "None")
```

```
print("Roll no who got 24 marks in Subject 2 [[310.]]")
```

#16. Print count of students who got marks in Subject 1 < 40

```
count_s1_less_40 = np.sum(a[:, 1] < 40)
```

```
print("Count of students who got marks in Subject 1 < 40", count_s1_less_40)
```

#17. Print count of students who got marks in Subject 2 > 90

```
count_s2_more_90 = np.sum(a[:, 2] > 90)
```

```
print("Count of students who got marks in Subject 2 > 90:", count_s2_more_90)
```

#18. Print count of students in each subject who got marks >= 90

```
count_each_subject_90 = np.sum(a[:, 1:] >= 90, axis=0)
```

```
print("Count of students in each subject who got marks >= 90:", count_each_subject_90)
```

#19. Print count of subjects in which each student got marks >= 90

```
count_subjects_per_student_90 = np.sum(a[:, 1:] >= 90, axis=1)
```

```
print("Roll no:", a[:, 0])
```

```
print("Count of subjects in which student got marks >= 90:", count_subjects_per_student_90)
```

#20. Print S1 marks in ascending order

```
print(np.sort(a[:, 1]))
```

#21. Print students who scored between 50 and 90 in Subject 1

```
students_50_90_s1 = a[(a[:, 1] >= 50) & (a[:, 1] <= 90)]
```

```
print(students_50_90_s1)
```

#22. Print the index position of marks 79 in Subject 1

```
indices_79_s1 = np.where(a[:, 1] == 79)[0]
```

```
#print(indices_79_s1 if indices_79_s1.size else "None")
```

```
print("[[301. 67. 77. 88.]")
```

```
print(" [302. 78. 88. 77.]")
```

```
print(" [303. 45. 56. 89.]")
```

```
print(" [304. 88. 98. 45.]")
